Public Companies: Crypto Industry Beneficiaries

Stocks that benefit from crypto activity or generate crypto -- not the cryptocurrencies themselves

Breaking context: Circle just received final OCC approval today (July 10, 2026) to establish Circle National Trust, a federally supervised bank -- shares surged 14% on the news. This caps a wave of crypto firms (BitGo, Ripple, Paxos, Fidelity Digital Assets, Crypto.com) racing to become federally chartered banks rather than just crypto-native companies, a structural shift toward owning the regulated financial stack directly.

1. Bitcoin Mining (Pure-Play & AI-Compute Hybrid)

Companies that generate cryptocurrency directly. Many are pivoting hardware/power infrastructure toward AI/HPC hosting as a second revenue stream.

Company	Ticker	Role	Recent Signal (2026)
IREN	IREN	Bitcoin miner that pivoted hard into AI data center hosting	Stock ran from $5 to $70+ in 2025 on its AI pivot; signed $9.7B Microsoft deal; secured $3.65B GPU financing facility
MARA Holdings	MARA	One of the largest Bitcoin miners by hash rate and BTC reserves	Holds mined Bitcoin on balance sheet rather than selling it; expanding into adjacent compute/energy infrastructure
Riot Platforms	RIOT	Large-scale industrial Bitcoin mining with major power procurement operations	Stock up ~88% in 2026; multiple analyst price target raises (KBW to $37, Jefferies Buy initiation); new nuclear-powered data center collaboration with Terrestrial Energy
CleanSpark	CLSK	US-based Bitcoin miner	Continues to be named among the core US mining names alongside Riot and MARA
TeraWulf	WULF	Bitcoin miner transitioning toward high-margin HPC leasing	Named a premier institutional pick for its transition to multi-billion-dollar hyperscaler/sovereign cloud HPC contracts
Core Scientific	CORZ	Bitcoin miner with growing HPC/AI hosting business	Part of the broader miner-to-AI-infrastructure pivot alongside IREN and TeraWulf
Cipher Mining	CIFR	US Bitcoin miner	Regularly cited among the core publicly traded US mining names
Bitdeer Technologies	BTDR	Vertically integrated miner that designs its own ASIC mining chips	Broke ground on a new energy/digital infrastructure facility in Alberta, Canada (June 2026)
Hut 8	HUT	Bitcoin mining and digital infrastructure company	Long-tenured miner name, regularly moves with Bitcoin price alongside MARA and Riot
HIVE Digital Technologies	HIVE	Renewable-energy-powered mining across Canada, Sweden, Paraguay, Iceland; also HPC services	Priced $115M private offering of exchangeable notes to fund expansion (June 2026)

2. Mining Hardware / ASIC Chip Makers

Company	Ticker	Role	Recent Signal (2026)
Canaan	CAN	Designs and manufactures ASIC chips and mining rigs for Bitcoin mining	One of the few pure-play publicly traded mining hardware manufacturers (vs. Bitmain, which remains private)

3. Crypto Exchanges & Trading Platforms

Company	Ticker	Role	Recent Signal (2026)
Coinbase Global	COIN	Largest US crypto exchange; custody, staking, and blockchain infrastructure	Q1 2026 revenue $1.55B (down 23.7% YoY on trading volume) but subscription/services revenue up 13%; stablecoin revenue up 61% to $364M; completed $2.9B Deribit derivatives acquisition, pushing an "Everything Exchange" strategy
Bullish	BLSH	Institutional crypto exchange; also owns crypto media outlet CoinDesk	Completed US IPO in 2025, joining Coinbase and Gemini as a public exchange operator focused on institutional flow
Gemini	GEMI	Regulated exchange and custody platform (Winklevoss-founded)	Completed Nasdaq IPO in September 2025
Robinhood	HOOD	Retail brokerage with major crypto trading exposure alongside equities/options	Up ~185-190% in 2025 on retail trading resurgence; high-margin Gold subscription program cited as valuation support

4. Stablecoin Issuers

Company	Ticker	Role	Recent Signal (2026)
Circle Internet Group	CRCL	Issuer of USDC, the second-largest US dollar stablecoin (~$73.2B circulating)	Received final OCC approval TODAY (July 10, 2026) for Circle National Trust bank charter; shares up 14% intraday on the news

Note: Tether (USDT), the largest stablecoin issuer at $184.1B circulating, is privately held and not directly investable.

5. Digital Asset Custody & Institutional Infrastructure

The 'picks and shovels' layer: companies that secure, custody, and service crypto for institutions rather than trading it themselves.

Company	Ticker	Role	Recent Signal (2026)
BitGo Holdings	BTGO	Qualified custody, wallet tech, staking, and settlement for institutions; $100B+ in assets under custody	2026's first crypto IPO (NYSE, Jan 2026), raised ~$213M at a $2.08B valuation, shares jumped 20%+ intraday; received full unconditional OCC bank approval (July 2026)
Galaxy Digital	GLXY	Institutional trading, asset management, staking, custody, tokenization -- plus AI/HPC data center infrastructure	Diversified digital-asset financial services model spanning both crypto-native and AI infrastructure revenue
Bakkt	BKKT	Crypto trading/custody infrastructure embedded into partner businesses; expanding into stablecoins/payments	Advancing Indian market entry following regulatory approval (June 2026)

6. Corporate Bitcoin Treasury Holders ("Digital Asset Treasury" Companies)

Companies whose core public-market thesis is holding Bitcoin on the balance sheet as a leveraged proxy for BTC price -- distinct from operating businesses that merely accept or facilitate crypto.

Company	Ticker	Role	Recent Signal (2026)

Strategy (formerly MicroStrategy)	MSTR	Business-intelligence software company whose primary strategy is now accumulating Bitcoin via debt/equity issuance	Shares fell to $85-86 by July 2026, an 11th consecutive monthly loss, as Bitcoin fell below $59,000 -- illustrates the leverage risk of this model in downturns as much as upside in rallies
Twenty One Capital	XXI	Bitcoin-native public company built specifically around accumulating and holding BTC	Began trading on NYSE in December 2025; outlined operating plans to "build the Bitcoin company" in 2026

Caution: this category carries amplified downside as well as upside -- MSTR's 2026 performance is a live example of leveraged treasury strategies underperforming Bitcoin itself during a downturn.

7. Payments & Financial Market Infrastructure

Established financial infrastructure companies capturing crypto-adjacent revenue without being crypto-native.

Company	Ticker	Role	Recent Signal (2026)
PayPal	PYPL	Issues its own PYUSD stablecoin; enables crypto buy/sell/hold within its consumer platform	Continues to expand stablecoin and crypto checkout functionality across its network
Block (formerly Square)	XYZ	Cash App integrates Bitcoin buying/selling; broader fintech ecosystem	Consumer crypto access remains a core Cash App feature alongside its broader payments business
Visa	V	Piloting stablecoin settlement on its payment network	Cited by Motley Fool analysts as better-positioned than pure stablecoin issuers given its established settlement rails
CME Group	CME	Lists Bitcoin and Ethereum futures/options; crypto is under 1% of daily volume but a growing product line	Continues to expand regulated crypto derivatives products for institutional hedging/speculation

Categories Worth Adding

• **Tokenization / Real-World Assets (RWA)** — the fastest-growing 2026 narrative per industry outlooks (tokenized deposits, tokenized equities); largely running through the custody/infrastructure names above (BitGo, Circle, Coinbase) rather than as standalone tickers yet.

• **Crypto-Linked ETF Issuers** — BlackRock (BLK), the issuer of the dominant spot Bitcoin ETF (IBIT), captures meaningful fee revenue from crypto without being a crypto company; worth including if you want asset-manager exposure alongside operating companies.

• **Blockchain Oracle/Data Infrastructure** — Chainlink and similar oracle networks are foundational to on-chain finance but are themselves tokens, not equities, so they fall outside a stocks-only screen by definition.

• **Power/Energy Suppliers to Miners** — given how directly mining profitability depends on power costs, utilities and power infrastructure companies with large mining-hosting contracts (some already appear in your AI power supply chain list) are an indirect but real beneficiary category.

Generated July 10, 2026. This is a disjoint reference set, not a ranked or filtered list. Crypto-adjacent equities carry elevated volatility and are highly sensitive to regulatory developments and underlying token prices -- not investment advice.
