

Public Companies: Powering AI Data Centers

Full power supply chain -- generation, storage, grid equipment, construction, and diversified utilities

Context: 2026 has seen the largest wave of power-sector consolidation in decades, driven explicitly by AI data center demand: Constellation's \$16.4B acquisition of Calpine (closed Jan 2026), and NextEra's pending \$67B all-stock acquisition of Dominion Energy (announced May 2026, the largest US energy deal since Exxon-Mobil), which would create the world's largest regulated utility. This M&A wave is itself a signal of where capital is concentrating.

1. Natural Gas Generation & Turbines

Gas is the fastest-to-build firm power source for data centers. Turbine demand is outstripping a supply chain controlled by three manufacturers; order books are full through 2029-2031.

Company	Ticker	Role	Recent Signal (2026)
GE Vernova	GEV	Leading heavy-duty gas turbine manufacturer; also nuclear (BWRX-300 SMR) and grid equipment	~20% of gas power order book now going to AI/data center customers; Power services backlog \$70B, up \$9B YoY; turbines powering xAI Colossus and OpenAI Stargate
Siemens Energy	XTRA: ENR / OTC: SMEG F	Major heavy-duty gas turbine manufacturer (with GE Vernova and Mitsubishi, >70% of global capacity)	Struggling to keep pace with AI-driven turbine demand; expanding production capacity through 2026
Mitsubishi Heavy Industries	TYO: 7011	Third major gas turbine OEM; urgently adding capacity	Targeting >30% capacity increase, called insufficient by CEO amid demand surge (2026)

2. Nuclear (Summary -- See Prior Dedicated List for Full Detail)

Already covered in depth in an earlier list; included here only for completeness of the full power stack.

Company	Ticker	Role	Recent Signal (2026)
Constellation Energy	CEG	Largest US nuclear fleet; now also natural gas/geothermal via Calpine	Closed \$16.4B Calpine acquisition (Jan 2026), creating a 60 GW "clean energy titan"; new 380 MW CyrusOne deal
Vistra	VST	Second-largest US nuclear fleet plus gas/renewables	Continues to compete directly with Constellation for hyperscaler power deals (still independently public as of mid-2026)
Oklo / X-Energy / NuScale / Talen / Dominion	OKLO / XE / SMR / TLN / D	SMR developers and nuclear-exposed utilities	See dedicated nuclear list for detail

3. Utilities & Diversified Power Producers with Major Data Center Exposure

Regulated and semi-regulated utilities where data center load growth is now a primary earnings driver and the center of the current M&A; wave.

Company	Ticker	Role	Recent Signal (2026)
NextEra Energy	NEE	Largest US utility by market value (Florida Power & Light) plus largest renewables/storage developer	Pending \$67B acquisition of Dominion (largest US energy deal since 1998); data center power pipeline hit 21 GW; regulated capital plan ~\$138B

Dominion Energy	D	Utility serving the world's largest data center hub (Northern Virginia): Google, Amazon, Microsoft, Meta customers	Agreed to be acquired by NextEra for \$67B (May 2026); Virginia legislation now directs regulators to allocate costs to data centers
Southern Company	SO	Major Southeast regulated utility (Georgia Power) with significant data center interconnection queue	Benefiting from Georgia's data center buildout alongside EV/manufacturing load growth
Duke Energy	DUK	Major Southeast/Midwest regulated utility	Merged regulated utility subsidiaries in April 2026, a precedent cited for the NextEra-Dominion deal
American Electric Power	AEP	Large multi-state transmission-heavy utility	Significant data center interconnection requests across its footprint (Ohio, Virginia, Texas)
Entergy	ETR	Gulf South regulated utility with nuclear and gas generation	Signing large-load agreements tied to data center and industrial customers
Talen Energy	TLN	Independent power producer with nuclear (Susquehanna) supplying Amazon directly	Expanded PPA with Amazon for 1,920 MW; exploring SMR technology

4. Solar & Renewables

Fastest-to-build generation category; combined with storage to deliver firmer power and bypass interconnection queues via co-location.

Company	Ticker	Role	Recent Signal (2026)
First Solar	FSLR	Leading US solar panel manufacturer	Cited among solar names positioned for accelerating sales tied to AI-driven power spending (2026)
Brookfield Renewable	BEPC / BEP	Global renewable power developer/operator (solar, wind, storage, hydro)	\$5B partnership referenced in on-site generation deals tied to data center campuses
Nextpower	Recently public	Solar tracker/technology platform expanding into battery storage and power conversion	Stock hit all-time high on \$ multi-billion Prevalon (BESS) acquisition targeting AI/hyperscaler market (May 2026)
Orsted	OTC: DNNY	Major offshore/onshore wind and solar developer	Solar-plus-storage PPA supplying Meta's Arizona data center (300 MW solar + 1,200 MWh storage via Fluence)

5. Battery Storage & Grid-Scale Storage

Enables 24/7 firm power from intermittent sources and helps data centers bypass interconnection delays via co-located storage.

Company	Ticker	Role	Recent Signal (2026)
Fluence Energy	FLNC	Largest deployed fleet of grid-scale energy storage globally (50 GWh, ~300 projects)	Supplied storage for Google's first zero-emission backup project and Meta's Arizona solar-plus-storage PPA
Eos Energy Enterprises	EOSE	Alternative battery chemistry (zinc) for long-duration grid storage	Positioned as a domestic, non-lithium storage option amid supply chain diversification push
Albemarle	ALB	Major lithium producer feeding battery supply chains	Cited among energy storage-linked stocks benefiting from grid battery demand growth

6. On-Site / Behind-the-Meter Generation & Backup Power

Bypasses grid interconnection queues entirely by generating power directly at the data center site.

Company	Ticker	Role	Recent Signal (2026)
Bloom Energy	BE	Solid oxide fuel cells (SOFC) for direct on-site data center power	Q1 2026 revenue \$751M, up 130% YoY; annual guidance \$3.4-3.8B; powering Oracle's Project Jupiter (up to 2.45 GW)
Plug Power	PLUG	Hydrogen fuel cell systems and infrastructure	Positioned as higher-beta optionality in the on-site power/backup category
Caterpillar	CAT	Diesel/gas generator sets for backup and prime power	Named alongside GE Vernova as a beneficiary of AI data center power buildout (2026)
Cummins	CMI	Gensets and backup power systems	Core supplier for data center uptime/backup power requirements
Generac	GNRC	Backup and standby power generation systems	Benefiting from broader backup-power demand tied to grid strain and data center buildout

7. Grid Equipment: Transformers, Switchgear, Power Distribution & Cooling

The physical bottleneck layer: transformer lead times of 2-3 years are delaying more than half of planned data centers per 2026 industry reporting.

Company	Ticker	Role	Recent Signal (2026)
Eaton	ETN	Dominant North American installed base in transformers, switchgear, UPS, liquid cooling	Record Electrical Americas Q4 sales \$3.51B, up 21%; backlog \$14.5B; investing hundreds of millions in new US transformer/switchgear capacity
Vertiv	VRT	Integrated data center power and cooling infrastructure, especially direct-to-chip liquid cooling	Project backlog over \$15B (end of 2025); shares up ~105% YTD; frequently cited as the leading "picks-and-shovels" data center name
Schneider Electric	EPA: SU / OTC: SBGS F	Medium-voltage switchgear, power distribution, and EcoStruxure DCIM/digital twin software	Expanding US switchgear production; differentiated by software moat for data center design
ABB	ABBN. SW	Electrification and grid equipment; also industrial robotics (see robotics list)	Core grid/electrification exposure alongside Eaton and Schneider
Hitachi Energy	Part of Hitachi , TYO: 6501	Large power transformers and HVDC systems	\$1B+ North American investment including a new Virginia transformer facility, expected largest in the US by 2028
Powell Industries	POWL	Engineered switchgear systems	Concentrated pure-play beneficiary of grid interconnect and substation buildout
Prysmian	OTC: PRYM F	High-voltage cable manufacturer	Core supplier for grid interconnects tying new generation to data center campuses

8. Grid Infrastructure Construction / EPC

Engineering, procurement, and construction firms physically building the transmission lines, substations, and power plants.

Company	Ticker	Role	Recent Signal (2026)
Quanta Services	PWR	Leading electric power infrastructure contractor: transmission lines, substations, grid connections	Q1 2026 revenue \$7.87B, up 26% YoY; backlog \$48.5B; CEO pegs addressable opportunity at \$2.4T through 2030
MasTec	MTZ	Infrastructure construction spanning power, pipeline, and communications	Raised 2026 EPS guidance to \$8.79, up 34%, on grid/data-center-linked construction demand

9. Natural Gas Midstream / Pipelines (Fuel Supply Side)

Pipeline operators positioned to move additional gas volumes to new power plants serving data center hubs, particularly in Texas and Virginia.

Company	Ticker	Role	Recent Signal (2026)
Kinder Morgan	KMI	Major US natural gas pipeline network	Cited as a top beneficiary of data-center-driven gas demand growth (potentially 3+ bcf/day by 2030)
Williams Companies	WMB	Natural gas gathering, processing, and transport	Expanding capacity near data center hubs; core midstream beneficiary
Energy Transfer	ET	Diversified midstream pipeline network	Positioned among largest midstream beneficiaries of data-center gas demand

Categories Worth Adding for Full Coverage

- **Geothermal** — a smaller but growing baseload category; Calpine (now part of Constellation) is a leading operator, and several private geothermal startups (Fervo Energy, Sage Geosystems) have signed data center-linked deals.
- **Long-Duration Energy Storage (non-lithium)** — iron-air and other multi-day storage chemistries (e.g. Form Energy, private) aimed at seasonal firming; distinct from the 4-6 hour lithium-ion storage covered above.
- **Power Semiconductors** — GaN/SiC power electronics companies (e.g. Navitas, Wolfspeed) that improve power conversion efficiency inside the data center itself; adjacent to, but distinct from, grid equipment.
- **Grid Software & Interconnection Management** — software platforms managing interconnection queues, demand response, and virtual power plants; increasingly cited as a bottleneck-relief category separate from physical equipment.
