

Public Companies: CRISPR & AI in Cancer Research

Segmented by role in the biomedical value chain, with recent (2026) partnership/clinical signals

1. CRISPR / Gene-Editing Platforms

Companies whose core IP is the editing technology itself (base editing, prime editing, Cas9/Cas12a), applied to cancer among other diseases.

Company	Ticker	Role	Recent Signal (2026)
CRISPR Therapeutics	CRSP	Co-developer of Casgevy, the first approved CRISPR therapy; broad oncology/autoimmune pipeline	New collaboration with Eli Lilly evaluating zugo-cel in aggressive B-cell lymphomas; CTX112 autoimmune data due H2 2026
Intellia Therapeutics	NTLA	In vivo CRISPR editing platform (no cell extraction required)	Continued in vivo editing data readouts across rare disease and oncology-adjacent programs
Beam Therapeutics	BEAM	Base editing (precision single-letter DNA correction)	Phase 1/2 results expected in 2026 for BEAM-301 (glycogen storage disease)
Editas Medicine	EDIT	Exclusive licensee of Broad Institute Cas9/Cas12a patents for human medicine	Pivoting toward in vivo gene editing medicine pipeline
Caribou Biosciences	CRBU	Cas12a chRDNA ("chardonnay") next-gen editing; off-the-shelf CAR-T for blood cancers	FDA RMAT designation for CB-011 (multiple myeloma) and vispa-cel (B-NHL) in 2026
Prime Medicine	PRME	Prime editing (search-and-replace gene correction)	Advancing precision editing pipeline beyond base/Cas9 approaches

2. AI-Native Drug Discovery Platforms (Oncology-Focused)

Companies whose core product is an AI/ML platform for identifying or designing cancer drug candidates, monetized via pharma partnerships and licensing.

Company	Ticker	Role	Recent Signal (2026)
Recursion Pharmaceuticals	RXRX	Large-scale cellular imaging + ML platform; merged with Exscientia in 2024	Nvidia-built supercomputer; active Bayer and Roche/Genentech partnerships (\$150M+ antibody-discovery deal)
Schrodinger	SDGR	Physics-based computational molecular design platform	Continues to license platform to pharma while advancing owned oncology pipeline
Relay Therapeutics	RLAY	Protein motion/dynamics-based computational drug design	Oncology-focused precision medicine pipeline advancing through clinic
Insilico Medicine	HKEX-listed 2025	End-to-end AI drug discovery/generation platform	Furthest-advanced AI-designed molecule in trials (Phase 2); expanding oncology programs

XtalPi	2228.HK	AI + robotics platform for molecular discovery and drug design	Backed by Google, SoftBank, Tencent; ~\$1.9B raised, active pharma discovery contracts
Generate:Biomedicines	2026 IPO	Generative AI protein design platform for oncology/immunology therapeutics	Newly public via 2026 IPO; ~17 programs and established pharma partnerships

3. Clinical-Stage Cell & Gene Therapy / CAR-T Oncology Companies

Companies applying gene-edited or engineered cell therapies directly to cancer treatment, largely downstream beneficiaries of CRISPR and AI-designed constructs.

Company	Ticker	Role	Recent Signal (2026)
Legend Biotech	LEGN	BCMA-targeted CAR-T (Carvykti) for multiple myeloma, with J&J;	Carvykti fastest-growing CAR-T product (93% YoY growth in 2024); expanding into solid tumors
Autolus Therapeutics	AUTL	Precision-engineered, multi-targeted CD19 CAR-T	FDA approval of Aucatzyl (2024) reset company from developer to commercial operator
Allogene Therapeutics	ALLO	Allogeneic ("off-the-shelf") CAR-T platform	Interim cema-cel data expected Q2 2026, a key 2026 catalyst
Fate Therapeutics	FATE	iPSC-derived off-the-shelf CAR-T and CAR-NK platform	Presented early Phase 1 solid-tumor data for FT836 at ASCO 2026

4. Genomics & Sequencing Infrastructure (Enabling Tools)

Upstream tools and data companies that CRISPR and AI drug-discovery platforms depend on for sequencing, synthetic DNA, and training data.

Company	Ticker	Role	Recent Signal (2026)
Illumina	ILMN	Dominant DNA sequencing platform provider; core infrastructure for oncology genomics	New BioInsight data unit; Nvidia AI-genomics partnership and Tempus partnership signed in 2025
10x Genomics	TXG	Single-cell and spatial genomics tools widely used in tumor microenvironment research	Expanding multi-omics portfolio adopted in translational oncology research
Twist Bioscience	TWST	Synthetic DNA manufacturing at scale	New data-sales business line to AI drug-discovery companies; ~\$25M FY2025 order growth from AI customers
Pacific Biosciences	PACB	Long-read (HiFi) sequencing for complex genomic regions	Used in oncology structural-variant and rare-disease detection
Thermo Fisher Scientific	TMO	Broad genomics/oncology tools (Ion Torrent, OncoPrint assays)	Announced OpenAI collaboration (Oct 2025); FDA-approved NGS companion diagnostic for NSCLC (Aug 2025)

5. Major Pharma Anchor Partners (Capital & Validation Signal)

Not pure-plays, but the companies whose partnership and M&A decisions are the clearest signal of which platforms/therapies are gaining real traction.

Company	Ticker	Role	Recent Signal (2026)
Eli Lilly	LLY	Most aggressive pharma investor across AI discovery platforms	\$1.7B+ in Isomorphic Labs milestones; \$1B Nvidia AI co-innovation lab; Chai Discovery deal (all announced/expanded 2026)
Novartis	NVS	Major AI drug-discovery licensee	~\$1.2B Isomorphic Labs partnership, expanded in 2025 signaling renewed conviction
Roche / Genentech	RHHBY	AI drug discovery + CAR-T/cell therapy acquirer	\$150M+ Recursion antibody-discovery deal; \$1.5B Poseida Therapeutics (CAR-T) acquisition
Johnson & Johnson	JNJ	AI discovery partner and CAR-T commercial partner	Became Isomorphic Labs' third pharma partner (2026); co-owns Carvykti with Legend Biotech
Bristol Myers Squibb	BMJ	AI immuno-oncology partner and CAR-T franchise owner	\$80M+ Owkin collaboration for immuno-oncology target identification; owns Juno Therapeutics CAR-T assets
GSK	GSK	First major foundation-model licensing (not just R&D collaboration) deal in biotech	5-year, \$50M-upfront licensing deal with Noetik for lung/colorectal cancer outcome-prediction models
Gilead Sciences	GILD	CAR-T pioneer (Kite Pharma) and active oncology acquirer	\$6.6B acquisition of Arcellx (2026); owns Yescarta/Tecartus CAR-T franchise
Merck	MRK	Oncology M&A leader amid Keytruda patent-cliff pressure	\$6.7B Terns Pharmaceuticals acquisition (2026) as part of pipeline-refill strategy
