

Public Companies: EV & Autonomous Driving

Manufacturers, autonomy software, sensors, chips, charging, batteries, and long-haul trucking

Context: 2026 is the year robotaxis and autonomous trucking moved from pilot to real revenue. Waymo now provides 400,000+ paid rides per week across 11+ US cities and is expanding to London and Tokyo. Tesla's Austin robotaxi service is expanding to Phoenix, Houston, and Dallas. Aurora Innovation began fully driverless (no safety monitor) long-haul trucking between Fort Worth and El Paso. Mobileye is targeting a 2027 robotaxi launch and just acquired a humanoid robotics company (Mentee Robotics), explicitly framing itself as a "Physical AI" company rather than just an auto supplier.

1. EV Manufacturers -- Pure-Play

Company	Ticker	Role	Recent Signal (2026)
Tesla	TSLA	Largest US EV maker; also leading FSD/robotaxi software effort	Robotaxi service live in Austin, expanding to Phoenix, Houston, Dallas through 2026
BYD	OTC: BYDD F	World's largest EV maker by volume; also a major battery manufacturer (Blade Battery)	Continues to hold dominant global EV market leadership, unlikely to be overtaken near-term
Rivian	RIVN	US EV maker (trucks/SUVs); vertically integrated electronics and propulsion	2025 gross profit of \$144M vs. a \$1.2B gross loss in 2024; launching R2 model and e-scooter spinoff "Also" in 2026
Lucid Group	LCID	Luxury EV maker; battery/powertrain technology licensing	Uber/Lucid/Nuro partnership produced the Gravity-based robotaxi revealed at CES 2026
XPeng	XPEV	Chinese "smart EV" maker with in-house autonomy chip (Turing AI)	Targeting 550,000-600,000 2026 deliveries; unveiled AEROHT flying car for 2026 mass production
NIO	NIO	Chinese premium EV maker, known for battery-swap infrastructure	Remains volatile; technical indicators suggest possible rebound setup as of mid-2026
Li Auto	LI	Chinese EV/PHEV maker	Continues to scale alongside XPeng and NIO in the competitive China EV market

2. Legacy Automakers with Major EV Programs

Company	Ticker	Role	Recent Signal (2026)
General Motors	GM	Legacy automaker building EV momentum; also pursuing L3 autonomy	Building toward L3 autonomous capability alongside EV lineup expansion
Ford	F	Legacy automaker with EV and hybrid lineup	Continues to balance EV investment with profitable combustion/hybrid lines amid slower EV demand growth
Volkswagen Group	OTC: VWAG Y	Largest European automaker, aggressive EV push; investor in QuantumScape; JV with Rivian	32% YoY increase in global EV deliveries in 2025; ID. Buzz robotaxi rollout with Uber using Mobileye tech
Stellantis	STLA	Multi-brand automaker (Jeep, Ram, Chrysler, Peugeot) with expanding EV lineup	Continues multi-brand EV platform rollout across its portfolio
Toyota	TM	World's largest automaker by volume; more gradual EV/hybrid transition strategy	Continues hybrid-led strategy while scaling battery EV investment

3. Autonomous Driving Platforms & Robotaxi Operators

Company	Ticker	Role	Recent Signal (2026)
Alphabet (Waymo)	GOOGL	Operates the most commercially deployed robotaxi service in the US	400,000+ paid rides/week across 11+ US cities; new \$29.99/month subscription tier; expanding to London and Tokyo in 2026
Mobileye Global	MBLY	Leading ADAS supplier (EyeQ chips in 300M+ vehicles); building toward its own robotaxi service	8-year automotive revenue pipeline at \$24.5B (+42% since 2022); targeting own robotaxi launch in a major US city in 2027; acquired Mentee Robotics (humanoid) Feb 2026
Pony.ai	PONY	Chinese robotaxi operator (Beijing, Guangzhou, Shenzhen, Shanghai)	Q1 2026 robotaxi revenue up 395% YoY

4. Autonomous Long-Haul Trucking

The category specifically outside consumer driving that you flagged -- freight autonomy is commercializing on a similar timeline to robotaxis.

Company	Ticker	Role	Recent Signal (2026)
Aurora Innovation	AUR	Largest US pure-play autonomous trucking company (Aurora Driver)	Began fully driverless (no safety monitor) trucking between Fort Worth and El Paso, TX; targeting full monitor removal Q2 2026 and a 200-vehicle fleet by year-end

Note: several other notable autonomous trucking players -- Kodiak Robotics, Waabi, Einride, Bot Auto -- are private or only recently/partially public via SPAC; worth verifying current listing status individually given how fluid this sub-sector's cap tables have been.

5. LiDAR & Perception Sensors

A historically capital-starved sector now consolidating around a few names with real revenue as L3/L4 adoption accelerates.

Company	Ticker	Role	Recent Signal (2026)
Hesai Group	HSAI	Global LiDAR volume leader; 51% China market share (Feb 2026); expanding into robotics/humanoids	Raised 2026 shipment guidance to 3-3.5M units; Q1 2026 revenue guided up 24-33% YoY; selected by Unitree for humanoid robot LiDAR
Innoviz Technologies	INVZ	Automotive-grade LiDAR, design win on BMW 7 Series	More than doubled 2025 revenue with record gross margins; launched InnovizTwo Ultra Long Range (1km) for heavy trucking applications
Luminar Technologies	LAZR	Automotive LiDAR supplier	Facing significant competitive and financial challenges per 2026 sector analysis
Ouster	OUST	Diversified LiDAR across automotive, robotics, and industrial applications	Named the most attractive/undervalued 2026 LiDAR pick by Seeking Alpha, benefiting from diversification beyond pure automotive
Aeva Technologies	AEVA	4D LiDAR-on-chip technology	Flagged as overvalued with high cash burn relative to peers in 2026 sector analysis

6. Automotive AI Compute & Chips

The move from L2+ to L4 autonomy requires 10-100x more onboard compute, driving a new wave of automotive-grade AI silicon.

Company	Ticker	Role	Recent Signal (2026)
---------	--------	------	----------------------

Nvidia	NVDA	Drive Thor platform (2,000 TFLOPS) for L4 autonomy	Positioned as a leading next-gen automotive SoC alongside Qualcomm and Mobileye
Qualcomm	QCOM	Snapdragon Ride Flex platform for ADAS/AV compute	Competing directly with Nvidia and Mobileye for next-gen automotive SoC design wins
Ambarella	AMBA	CV3-AD685 automotive AI vision chip	Smaller-cap automotive AI silicon player alongside the larger Nvidia/Qualcomm/Mobileye group

7. EV Charging Infrastructure

Company	Ticker	Role	Recent Signal (2026)
ChargePoint	CHPT	Largest independent EV charging network operator/hardware maker	Showing one of the strongest trend-continuation setups in the EV infrastructure segment as of mid-2026
EVgo	EVGO	Fast-charging network operator	Continues fast-charging network buildout alongside ChargePoint and Blink
Blink Charging	BLNK	EV charging equipment and network operator	Showing signs of technical recovery in 2026 after a prolonged decline
Wallbox	WBX	Smart charging hardware for home and business	Smaller-cap charging hardware name rounding out the public charging infrastructure group

8. Batteries & Battery Materials

Company	Ticker	Role	Recent Signal (2026)
QuantumScape	QS	Solid-state battery developer targeting longer range/faster charging	Backed by Volkswagen investment; multiple commercial licensing deals signed with automakers
Solid Power	SLDP	Solid-state electrolyte/battery designer, licensing-focused model	Won \$50M DOE award for solid electrolyte production to bolster cash runway
Albemarle	ALB	Major lithium producer feeding EV battery supply chains	Core lithium supplier benefiting from broader battery demand growth (see also Critical Minerals list)
Panasonic	OTC: PCRFY	Major battery cell manufacturer; long-time primary Tesla supplier	Actively diversifying beyond Tesla with new supply deals with Lucid, Subaru, and Mazda

Note: the largest global battery makers by volume -- CATL, LG Energy Solution, Samsung SDI, CALB -- are foreign-listed (Shanghai/Shenzhen, Korea) or in CATL's case dual-listed HK/Shanghai; worth including if your screener has access to those exchanges.

9. Components, Power Electronics & AV-Enabling Suppliers

Company	Ticker	Role	Recent Signal (2026)
Aptiv	APTIV	High-voltage wiring, signal/power architecture, and AV software platforms	MOTIONAL joint venture with Hyundai provides direct robotaxi exposure
BorgWarner	BWA	EV motors, inverters, and drivetrain components	Core Tier-1 supplier of EV powertrain components across multiple OEMs
ON Semiconductor	ON	Power semiconductors (SiC) for EV drivetrains and charging	Key silicon carbide supplier for EV power electronics efficiency gains

STMicroelectronics	STM	Power semiconductors and automotive chips	Broad automotive semiconductor exposure across EV and ADAS applications
--------------------	-----	---	---

10. Ride-Hailing / Robotaxi Platform Integrators

Not autonomy developers themselves, but the distribution layer that determines which AV platforms reach riders at scale.

Company	Ticker	Role	Recent Signal (2026)
Uber Technologies	UBER	Rideshare platform integrating third-party AV fleets rather than building its own	Active partnerships with Waymo, Lucid/Nuro (Gravity robotaxi), and Volkswagen/Mobileye (ID. Buzz)
Lyft	LYFT	Rideshare platform with a more concentrated AV partnership strategy	Partners closely with Waymo and Motional; robotaxi service live in Phoenix and Las Vegas

Categories Worth Adding

- **Amazon/Zoox** — Amazon's Zoox robotaxi unit is a major competitor to Waymo/Tesla but is not separately investable; exposure only comes through Amazon (AMZN) as a whole.
- **Simulation & Testing Infrastructure** — software platforms for AV training/validation (e.g. Applied Intuition, private) are increasingly treated as a distinct layer, similar to the simulation gap flagged in the robotics list.
- **Map & Localization Data Providers** — HD mapping is a foundational AV input; most leading providers (e.g. what was HERE Technologies) are privately held or owned by automaker consortiums rather than standalone public stocks.
- **Insurance & Liability** — as AV liability frameworks evolve, insurers with early AV-specific underwriting products (a maturing niche) could be worth a dedicated pass given how directly regulatory/liability questions gate commercial AV scaling.
