

Public Companies: Nuclear Power for AI Data Centers

Publicly traded companies involved in nuclear energy supply for data center buildout

Companies With Signed Hyperscaler Deals

Company	Ticker	Role in Nuclear Power for Data Centers
Constellation Energy	CEG	Largest US nuclear operator; supplies power via long-term PPAs to Microsoft and Meta, including the Three Mile Island restart
Talen Energy	TLN	Nuclear utility; expanded PPA with Amazon for 1,920 MW from its Susquehanna plant to power AWS data centers
Dominion Energy	D	Regulated utility with existing nuclear fleet; signed MOU with Amazon to explore SMR development in Virginia
Vistra	VST	Nuclear plant operator partnering with Meta to supply existing reactor capacity
Oklo	OKLO	Developer of the Aurora fast reactor (SMR); partnered with Meta on a 1.2 GW campus in Ohio
X-Energy	XE	Developer of the Xe-100 Gen IV gas-cooled SMR; Amazon-backed, also allied with Korea Hydro & Doosan to explore powering AI infrastructure

Public SMR / Nuclear Plays Without a Hyperscaler Deal Yet

Company	Ticker	Role in Nuclear Power for Data Centers
NuScale Power	SMR	Only NRC-certified SMR design (VOYGR); anchor Idaho project was cancelled, now pursuing TVA project and data-center customers via partner ENTRAI Energy, but no signed hyperscaler PPA yet
GE Vernova	GEV	Developer of the BWRX-300 SMR through its Hitachi Nuclear Energy JV; targeting utility and industrial customers, no direct hyperscaler deal disclosed
Cameco	CCJ	Uranium producer and 49% owner of Westinghouse Electric, which is developing SMR technology and part of an \$80B US nuclear buildout agreement
Uranium Energy Corp	UEC	US uranium miner/fuel supplier positioned as upstream beneficiary of nuclear demand growth, not a reactor developer or direct data-center supplier

NANO Nuclear Energy	NNE	Early-stage microreactor developer (KRONOS design); submitted NRC construction permit application in April 2026, pre-revenue
